THIS PAGE BLANK (USPTO)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

O5-NOV-1992 (first entry)
Encodes truncated TNF-alpha 55kD receptor (197 amino acids).
tumour necrosis factor alpha; extracellular binding domain;
treatment; pulmonary diseases; septic shock; HIV infection; AIDS;
malaria; viral meningits; graft versus host disease;
autoimmune disease; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                            P-PSDB; R24080.

New polypeptide capable of binding human TNF alpha - comprises first three cysteine-rich subdomains of TNF alpha receptor for treating autoimmune disease, septic shock, HIV etc.

Example; Fig 7; 43pp; English.

This sequence encodes the designed TNF-alpha 55kD receptor for derivative, as present in pTNFRecd. This was produced as described in 024441. This derivative lacks the 81 carboxyl terminal residues of the cytoplasmic domain. The derivative could be used in the regulation of TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral meningitis, graft versus host disease and autoimmune diseases, esp. rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.

                                                  DNA encoding TNF binding protein and TNF- receptor - used in tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 1(1-3); 51pp; German.

CE pTNF-BP15 is one of 30 positives clones in a screened cDNA library from induced TNF-induced fibrosarcoma cells. A TNF-BP had been isolated from the urine of patients with uraemia and probes/primers were constructed from the determined amino acid sequence.

To produce a vector expressing a soluble form of TNF-binding protein, this plasmid was cut with XmmI, amplified by PCR and the amplified DNA cut with BamHI and EcoRI.

The resulting 0.75 kb DNA fragment was inserted into pT7/T3 alpha-19 (BRL) cut with the same enzymes to recover pTNF-BP. This was cut with BamHI and EcoRI, and the recovered fragment inserted into pDAD-CNF1 (D05283) to give the required plasmid pADTNF-BP.

See also Q05283 to give the required plasmid pADTNF-BP.

W09319777-A.
         New fusion protein tumour necrosis factor and human interleukin-1 receptor - useful in therapy, diagnosis and assays of e.g. rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc. Disclosure; Page 57-59; 85pp; English.
The sequences given in Q49931-32 encode human tumour necrosis factor receptor (TNF-R) and the sequences in Q4993-34 encode human interleukin-1 receptor (TL-TR). These sequences were used in the production of a fusion protein which conformed to one of the formulae:
                                                                                                                                                                                                                                                                                                                                                    Lambda-derived TNF-R cDNA.

These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple sclerosis, pulmonary fibrosis and silicosis, cerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and autoimmune dysfunctions.

                                                                                                                                                                                                                                                                                                                                                                              New tumour necrosis factor alpha binding protein and polypeptide - useful in treating cachexia, sepsis and auto immune diseases e.g. rheumatoid arthritis Disclosure; Fig 1; 25pp; English.

The sequence is that of DNA encoding tumour necrosis factor alpha binding protein which was obtd. from a human placental CDNA library in lambda gtil using a probe (Q20974). The DNA also encodes the extracellular domain of human TNF alpha receptor and as such it is useful for treating diseases where TNF alpha is involved as a causative agent, e.g. cachexia, sepsis and autoimmune diseases, specifically rheumatoid arthritis. See also Q20974.

Disclosure; Fig 21; 142pp; English.

The sequence encodes the entire 30 kD TNF inhibitor. The clone from which the sequence was obtd. was isolated from a CDNA library prepd. from RNA form U937 cells treated with PMA-VPHA. The whole gene can be inserted into expression vectors for prepn. of TNF inhibitor for use in the treatment of inflammatory and degenerative

Claim 4: Fig 1; 26pp; German.
Claim 4: Fig 1; 26pp; German.
Partial amino acid sequences were determined for the 55 and 75kD
Partial amino acid sequences were determined primers were
synthesised based on these partial sequences. The primers were used
to produce a cDNA fragment for use as aprobe to screen a human
placental cDNA bank constructed in lambda gtil. Positive clones were
identified and sequenced. DNA constructs comprising the TNF-BP coding
sequence may also contain a fragment encoding a human Ig domain.
Recombinant constructs are used to transform cells to confer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mat_peptide

CC Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shedding of the extracellular cc inducing agents, e.g. phorbol myristate acetate (PNA), depending on cell type. The only region of the receptor whose structure affects the cshedding response is the spacer region (see R75012) in the extracellular domain. This region is located close to a site of cleavage of the complete, and links the Cys rich module to the transmembrane domain. The spacer region of the encoded protein was used to create the chimeras cc subjected to deletion mutations (R75013-25) and substitutions cc subjected to deletion mutations (R75013-25) and substitutions cc side chain identity of these residues, with the acception of the most important residues are conformation of the protein adversely effect the shedding of the receptor is independent of the conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an inhibitor of a protease that is capable of cleaving the soluble TNR-R fragments of these inhibitors can be seen in cc managened and the function.

A dicistronic vector (T15930) comprises a regulatory region cerived from the cytomegalovirus immediate-early gene, a selectable dihydrofolate reductase gene positioned within an intron having a 5 wild-type ras splice donor site, a downstream sequence coding for an immunoadhesin, TnFr-IgG, capable of binding tumour necrosis factor, and a poly-A sequence. Transfection of CHO DHFR- cells and subsequent methotrexate amplification and growth of the cells in nutrient-rich medium gave TnFr-IgG in yields of 9.5 cug/ml (15-fold higher compared to conventional vector amplified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TIT 10

rheumatoid arthritis; graft rejection; graft vs. host; septic
effector protein; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease, septic shock, etc.

Claim 2; Figure 1; 17pp; English.

Modification of the tumour necrosis factor receptor by mutation or Modification of the tumour necrosis factor receptor by mutation or deletion modulates signal transduction and/or cleavage effected by the receptor. This modulation of activity can also be achieved using effector proteins which interact with the TNF receptor or the effector Molecules which interact with the TNF receptor or the effector proteins can be used to treat or prevent diseases associated with TNF activity e.g. autoimmune disease; rheumatoid arthiitis; graft rejection; graft vs. host disease or septic shock. They can also be used to treat overdoses of exogenous TNF.

C The Tumour Necrosis Factor Binding Protein I is the soluble for type I TNF receptor and constitutes a fragment of the cell surf. C form of this receptor, corresp. to its extracellular domain. There is no characteristic poly(A) addition signal near the 3' of the cDNA. The sequence ACTANA (tag m) may serve as an calternative to this signal, but with low efficiency.

05-NOV-1992 (first entry)
Encodes truncated TNF-alpha 55kD receptor (155 amino acids).
Encodes truncated TNF-alpha; extracellular binding domain;
truncated truncatery diseases; septic shock; HIV infection;
malaria; viral meningitis; graft versus host disease;
autoimmune disease; rheumatoid arthritis.
                    18-OCT-1990; GB-022648.

This construct was generated by joining PCR fragments by means of overlaps introduced into the primers used for PCR. Gel purified products of PCR's using 5'Cla, IA, IB, and 5D primers were mixed and subjected to further amplification using 5'Cla and 5D as primers. The resulting fragment was digested with ClaI and BglII and cloned into ClaI/BglII digested pTNFRecd, to yield pdeltaI, containing the sequence given. This derivative could be used to regulate TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral

Statistics: Mean 11.127; Variance 1.959; scale 5.680

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 31.442; Variance 119.617; scale 0.263

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hybrid dimeric protein comprising two co-expressed units - each probased on receptor or ligand and a subunit of a heterodimeric hormone, especially FSH, for inducing follicular maturation PS Example; Pages 37-38; 60pp; English.

CA novel fusion protein comprises 2 dimer forming co-expressed amino CC acid sequences, each consisting of a homodimeric or heterodimeric CC receptor chain or ligand, with ligand-receptor binding activity, CC bound directly or via a peptide linker to a subunit of a CC chain or subunits. The fusion protein each consisting of the funding a heterodimeric CC (hCG-alpha) fusion protein denoted by the present sequence, cc significantly increases the biological activity of the hormone cranes of injections needed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               based on receptor or ligand and a subunit of a heterodimeric process. Frample: Pages 34-35; 60pp; English.

Example: Pages 34-35; 60pp; English.

A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor chain or ligand, with ligand-receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoletin (TPO)/human chorionic gonadotrophin beta subunit (hCG-beta) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone component, reducing the requirement for hormone itself and the number of injections needed.
Homo sapiens.

                                                                                                                                                                                                                     PT rheumatoid arthritis, septic shock etc.

PS Claim 54; Fig 2; 100pp; English.

CC The sequence shows a native 30 kD TNF inhibitor which may be condified to contain at least one non-native cysteine residue, pref.

CC at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is contained to a non-peptidic polymer, pref. monomethoxy PEG via thio-ether bonds. Two such TNF inhibitor mols. may be linked via this non-peptidic spacer. The modified polypeptides show improved the construction of the properties, i.e. increased mol. wt. hence reduced collarance rate following s.c. or systemic administration, increased collypeptides may be used for treatment of TNF mediated diseases such as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor chain or ligand, with ligand-receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (TPO)/human chorionic gonadotrophin-beta subunit (hCG-beta) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone number of injections needed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-OCT-1992.

Example: Fig 7; 43pp; English.

This sequence is a truncated TNF-alpha receptor derivative, as en in pTNNRecd. This was produced as described in Q24440.

This derivative lacks the 81 carboxyl terminal residues of the cytoplasmic domain. The derivative could be used in the regulation of TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral meningitis, graft versus host disease and autoimmune diseases, esp. rheumatoi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Truncated TNF-alpha 55kD receptor.

tumour necrosis factor alpha; extracellular binding domain; treatment; pulmonary diseases; septic shock; HIV infection; malaria; viral meningits; graft versus host disease; autoimmune disease; rheumatoid arthritis.
                     10-NOV-1995 (first entry)
TNF-R-GBPH fusion protein.
TNF-R-GBPH fusion protein.
Hybrid peptide; malaria parasite; Plasmodium falciparum; fusion protein blood cell; cytokine receptor; glycophorin binding peptide 130 GBP 130; GBPH; glycophorin binding peptide homologue; glycophorin tumour necrosis factor receptor; TNF-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          See also Q24440-51,

CC Hybrid peptides for binding cytokines, comprising a malaria parasite (Plasmodium falciparum) peptide (capable of binding to a red blood CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor CC receptor (in accordance with H Loetscher et al. Cell, Vol. 61, 351-359) CC and glycophorin binding protein (GBP) homologue (GBPH). The CC cytokine receptors not normally found on RBCs means that the CC cytokine receptors not normally found on RBCs means that the CC cytokine can bind harmlessly to the RBC without deleterious effect. CC The RBC protects the hybrid peptides from excretion from the kidney, and CC another cell. GBP 130 or GBPH are the prefd. malaria parasite peptides cused, others include EBA 175 (175 kDa erythrocyte binding to a receptor in CC molecule (eg. exhibited by Plasmodium vivax). These peptides bind to CC pref. Glycophorin A, B and C, slalo glycophorteins, found on the surface cytokines in the circulation to reduce pathological damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                             PT a receptor peptide.

PS Example A; Page 53-54; 93pp; English.

CC Hybrid peptides for binding cytokines, comprising a malaria parasite CC (Plasmodium falciparum) peptide (capable of binding to a red blood CC (Plasmodium falciparum) peptide are claimed. R70103-25 are examples CC of these hybrid peptides. R70107 is a fusion of tumour necrosis factor CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359) CC and glycophorin binding protein (GBP) 130. The use of cytokine can bind CC are protein to the RBC without deleterious effect. The RBC protects the CC receptors not normally found on RBCs means that the cytokine can bind CC hybrid peptides from excretion from the kidney, and due to steric CC hindrance prevents the cytokines binding to a receptor in another cell. CC GBP 130 or GBPH (GBP homologue) are the prefid. malaria parasite peptides used, others include EBA 175 (175 kDa crythrocyte binding antigen), CC PMMSA (pre major merozoite surface antigen) and the Duffy binding CC receptor molecule (eg. exhibited by Plasmodium vivax). These peptides CC bind to pref. glycophorin A, B and C, sialo glycoproteins, found on CC the surface of RBCs. The hybrid peptides are thus used to lower the levels of free cytokines in the circulation to reduce pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 1(1-3); Sipp; German.
Clone pTNF-BP15 was used to contruct pADTNF-BP, for transfection of e.g. COS7 cells. The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or -beta (e.g. infectious or parasitic diseases, shock, cachexia, autoimmune diseases, adult respiratory distress syndrome etc., or side effects of treatment with TNG-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions.

                                                                                                             The linker may comprise 5-100 amino acids selected from Gly, Asp, Ser, Thr and Ala. These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or II-1, particularly in conditions in which both TNF and II-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple sclerosis, pulmonary fibrosis and silicosis, cerebral mediatia, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and beta, useful as therapeutic agent.

Disclosure; Fig 21; 142pp; English.

The sequence comprises the entire 30 kD TNF inhibitor. The clone from which the sequence was deduced was isolated from a cDNA library prepd. from RNA form U937 cells treated with PMA/PHA. The whole gene can be inserted into expression vectors for prepn of TNF inhibitor for use in the treatment of inflammatory and approximately and the treatment of inflammatory and the treatment of the sequence was sequenced.
                                                                                     TNF-alpha binding protein. Tumour necrosis factor alpha; extracellular domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tumour necrosis factor;
